

BookingRepository::add

BookingRepository::
remove

BookingRepository::
update

BookingRepository::
convertBookingToCsv

```
graph LR; A[BookingRepository::add] --> D[BookingRepository::convertBookingToCsv]; B[BookingRepository::remove] --> D; C[BookingRepository::update] --> D;
```

The diagram illustrates a mapping from three separate methods to a single target method. On the left, three white rectangular boxes are stacked vertically, each containing a method name: 'BookingRepository::add', 'BookingRepository::remove', and 'BookingRepository::update'. On the right, a single gray rectangular box contains the method name 'BookingRepository::convertBookingToCsv'. Three blue arrows originate from the right side of each white box and point towards the left side of the gray box, indicating that each of the three methods on the left is associated with or mapped to the single method on the right.
